Missing teeth?

Choose dental implants

OSSTEM
IMPLANT

1 What happens to the missing tooth if left untreated?

1. The upper and lower teeth do not bite down comfortably
2. Teeth drift closing the space that creates gaps
3. Food debris gets trapped in gaps, plaque builds up quickly. In extreme cases this can lead to gum disease and tooth decay
4. Resorption of jaw bone when left untreated for a prolonged period of time. This leads to difficulty wearing a denture
5. Loosening jaw bone will result in premature ageing by the lips and cheeks collapsing
6. Diminished digestive function and indigestion due to the inability to chew food well

Implants are the smart choice!

2 What are dental implants?

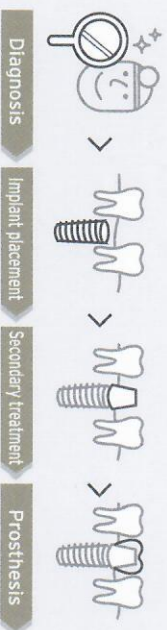

Dental implants are artificial tooth roots

Made from titanium they are placed by the dentist in the gap to secure a replacement tooth or bridge. The treatment can be for a single tooth or multiple teeth. Implants are also placed to secure an existing full denture. Dental implants provide a more natural option for replacing missing teeth than false teeth or a bridge.

3 Treatment procedure and lifespan

Implant treatment procedure

Life long treatment:

Implants are considered semi-permanent, although thorough regular check-ups and post-treatment care will guarantee a long implant lifespan.

4 Clinical cases

	Before treatment	After treatment
Missing one tooth		
Missing one tooth		
Missing several teeth		

5 Reasons to have dental implant treatment

Regain your confidence	Preserve your existing teeth	Enjoy what you eat
Talk, smile and chew food with ease and comfort without worrying about how you look	Unlike conventional bridged tooth replacement your adjacent teeth are untouched	Implants function like natural teeth allowing you to chew food with ease and digest your food well
Improve comfort	Preserve bone	Life long smile
Loose fitting dentures can be uncomfortable. Experience a securely fitting denture with implants	When a tooth is removed bone is lost. Placing of dental implants preserves bone. Severe bone loss causes premature ageing	Implants are a long term treatment which can last a life time with regular check-ups and good health

6 Why choose Osstem Implant

Extensively researched and tested

99.6% success rate*

Highest quality & latest technology

Outstanding support & service worldwide

A leader in the dental implant market

*Subjective satisfaction of Clinician and Short-Term Clinical Evaluation of Osstem T5/II SA Implant (J Korean Clinical Implant 2010;3(07):430-43)
